The JCM web site provides the tools you need, including the software information database with DIP switch information, our photo parts catalog, online ordering form, repair service, and more.

Parts are Parts

Part No. 069979

Description: Pusher Mechanism Assembly

Usage: This assembly in the cash box receives the notes from the transport, and stacks the notes in the storage area. The assembly is driven by a gear drive system powered by the transport motors. The gear on one side of the assembly drives the belts that deliver the note to the receiving plate. The three gears on the other side perform the stacking action in the storage area.

Note: Performing periodic preventive maintenance on the cash boxes once every six months will ensure peak performance. Use compressed air to blow out paper fibers and other debris that builds up over time inside the cash box. Inspect the belts for wear, and clean the rollers and O-rings with a stiff brush.

The list of JCM bill validator software provided herein notifies customers of the latest versions developed. However, the listing does not identify versions approved by gaming jurisdictional authorities for actual use. Customers should consult JCM's Customer Service/Parts Sales departments concerning approved versions for jurisdictions of intended use.

* i suffix indicates Intelligent Cash Box option.

Save Time and Labor with JCM's Intelligent Cash Box System

The ICB® (Intelligent Cash Box) system is a unique cash box/cash flow management system that allows the operator to track a cash box and its contents through the entire cash flow process. The ICB system eliminates the need for dedicating cash boxes to specific machines, or putting barcode identification on the cash boxes. The cash boxes are tracked electronically eliminating most variance issues.

Customer Notification/Tech Tips:

Question: What are the most common belts used in the JCM bill validators?

Answer: JCM actively works to standardize the belts used in our products. The reference table indicates the most commonly used belts by product and part number. During the standard Preventive Maintenance (P/M) program that JCM recommends, all of the belts in the machine are inspected for wear. This is caused by air-borne particles and material in the fiber from the notes rubbing off on the bill path, rollers and belts during transport. Use the following procedure to clean the belts:

- WBA: Turn on DIP switch #8, then apply power. Turn on DIP switch #1, then turn DIP switch #8 off.
- DBV: Turn on DIP switch #6 on SW-2, then apply power. Turn on DIP switch #1, and turn DIP switch #6 off.

Belt	Part. No.
DBV-145 head	040988
DBV-200 head	063354
WBA head	052585
DBV-SS upper transport	037572
DBV-SS lower transport	034872
LRS transport	040987
WBA upper transport	052584
WBA lower transport	052586

Use a lint-free cloth and a mild, non-abrasive detergent (dish soap) that does not contain alcohol or citrus-based cleansers to moisten the belts, then use a stiff brush to scrub the surfaces. This will restore the natural grip that will move the notes smoothly through the validators into the cash box.
